Experienced Development and Operation (DevOps) Engineer

Technical Skills Required:

- Develop recovery plans that defend the business from threats including from data loss, disaster, and security breaches.
- Design and implement effective monitoring schemes that promote proactive discovery of issues.
- Understand and use configuration management tools such as Puppet, Chef, Ansible and docker to create infrastructure that is repeatable and can evolve rapidly.
- Perform operational tool development, monitoring, logging, reporting, controls and automation
- Understand and use best practices for deployment processes and support
- Consult on overall production systems architecture
- Document configuration procedures

Non-Technical Skills Required:
- Good communication skills
- Ability to work effectively under stress
- Good command of writing and reading in English

A little bit about us:

We are a recently established start-up focused on mobile banking and mobile payment with international experience developing high quality software products in Iran and overseas.

Our office is based in Dowlat-Shariatie in a little corner close to Sadr highway.

We love new technologies, we work hard to deliver high quality software and we judge ourselves by the impact we make to the community and people we produce software for.
